3. Introduction

Introduction: Today workforce expectations are rapidly evolving. After further research my team and I discover 63% of employees cite skill gaps as the number one barrier for growth. Many companies are reducing entry level jobs due to experience. Also, AI has become a big component to completion for entry level jobs. Automations are changing super-fast and as technology gain more intelligence it eliminates many jobs. This is at 91% in the job field today AI has taken over. In today's society, there is a huge gap of graduates completing their degree and finding jobs. Many graduates are coming out of school unemployed. It has been shown that many courses that students are taken for their degree aren't given them the work experience that they actually need, so students are graduating with no work experience. This rases concerns because many students are earning their degree to get jobs upon completion. So, many companies are telling these graduate students they don't qualify for entry level jobs. Institution tracks academic success but lack tracking career development. A lot of other app offer help for academic but lack preparation like conventions, speaker events, and certification that can help students gain that experience while still finishing their degree. GradPace offers a real roadmap to the desired Carrer. Implementing gap detection for networking, projects, and live events that will further user in career readiness.

6. Glossary

API (Application Programming Interface): A set of rules that allow different software applications to communicate and exchange data with each other.

Authentication: The process of verifying a user's identity before allowing access to a system.

Backend: The server-side part of a website or application that handles logic, databases, and data processing.

Career Readiness: A measure of how prepared a student is to enter a specific career based on skills, experience, and qualifications.

Career Roadmap: A structured, visual plan that outlines a student's progress, goals, and required steps toward a specific career path.

Cloud Computing: The use of remote servers on the internet to store data and run applications instead of a local computer.

Data Leak: The accidental or unauthorized exposure of sensitive or private information.

Database: An organized collection of data that can be stored, accessed, and managed electronically.

Encryption: A security method that converts data into a coded form so that only authorized parties can read it.

Frontend: The user-facing part of a website or application that users interact with in their browser.

Gap Detection (Early-Warning System): A feature that identifies missing skills, experiences, or qualifications needed for a target career.

Industry Readiness Benchmarking: The process of comparing a student's profile against expected skills and qualifications for specific careers.

Location-Based Event Recommendations: Suggestions for nearby internships, networking events, or career opportunities based on user location.
Professional Data Input: User-provided information such as coursework, projects, internships, and certifications used to build a profile.

Survey Results Dashboard: A feature that displays aggregated insights from alumni data to inform students and administrators.

System Administrator: A role responsible for managing the platform, maintaining data quality, and overseeing system functionality.

Token (AI): A small unit of text processed by an AI model, such as a word, part of a word, or punctuation.

User Interface (UI): The visual elements of a software application that allow users to interact with it.

Web Server: A computer system or software that stores websites and delivers web pages to users when they request them through a browser.
